

How to Make a

Hugelbed

Dig down 5- 10 inches and save the soil to put on top.

Add compost on top of the soil.

Add the soil on top.

Hugelbeds only need to be watered a couple of times in the summer, saving water. They act like a nurse log in the forest. The wood holds water and releases it and nutrients to the plants.

They can be built on a driveway. Renters can have a garden then pick it up and take it with them when they move.
